SUMMARY

IT Support professional with hands-on experience providing 1st- and 2nd-line technical and desktop support to a large end-user base via phone, email, ticketing, and in-person. Experienced troubleshooting hardware, software, and network connectivity issues, and collaborating with senior IT staff to identify, document, and resolve root causes. Hands-on with identity and access management, endpoint deployment and management (MDM), account provisioning, and IT asset/inventory management. Familiar with cloud computing concepts, systems administration, and conference room A/V and videoconference support. Fast learner who takes ownership of new tasks, stays organized through clear documentation, and brings a team-oriented mindset while taking initiative to improve processes and address issues early.

WORK EXPERIENCE

Help Desk Technician | Fisher College IT | Sep 2025 – Apr 2026 • Boston, MA

- Served as a 1st- and 2nd-line point of contact for help desk support requests, troubleshooting end-user devices, peripherals, productivity applications, network connectivity, and identity/access issues across Windows and macOS environments for 1,000+ students, faculty, and staff — providing complete follow-through to successful resolution.
- Provided first-level technical support via telephone support rotation, email, ticketing, in-person, and remote tools (Quick Assist, RDP) — including remote support for home-based and offsite colleagues — documenting problems and solutions in the Service Desk ticketing system and consistently achieving first-contact resolution.
- Executed account provisioning, password resets, group membership changes, and deprovisioning in Active Directory, Microsoft Entra ID, and Microsoft 365 Admin Center — supporting joiner/mover/leaver workflows and MFA enrollment.
- Set up and configured desktops, laptops, and monitors; created and maintained computer images for 60+ Windows domain-joined endpoints; installed hardware and peripheral components (keyboards, printers, hard drives); and maintained accurate IT asset inventory and stock levels to support hardware upgrade/replacement projects.
- Configured and enforced endpoint policies via Microsoft Intune and Group Policy (GPO/GPP) — including AppLocker rules, software deployment, patch management, and Windows file permissions — across domain-joined PCs.
- Documented troubleshooting steps and issue trends in Spiceworks, informing management of recurring problem trends, created knowledge base articles, mentored and trained 3 interns on IT support workflows, and provided conference room A/V and videoconference administration and support.

IT Intern | Fisher College IT | Jul 2025 – Sep 2025 • Boston, MA

- Provided Tier-1/2 support for hardware, software, and network issues on Windows/macOS workstations using Spiceworks ticketing system and remote support tools; escalated issues requiring senior IT review.
- Performed endpoint migrations, printer and peripheral installs, mobile device and laptop support (including videoconference/AV equipment), and docking station setup; administered user accounts in Active Directory, Azure AD, and Microsoft 365 Admin Center supporting access provisioning.

PROJECTS

IT Infrastructure Lab: AD, Intune, Zabbix Monitoring & Server Administration | Dec 2025 – Mar 2026

- Built a Windows Server 2022 environment managing 100+ user accounts across structured OUs — handling full account lifecycle operations including provisioning, permission assignments, group membership, RBAC, and deprovisioning aligned with joiner/mover/leaver workflows.
- Configured DNS, DHCP, and domain-join policies; integrated Microsoft Entra ID with on-prem AD via Entra Connect for hybrid identity, SSO, and password writeback.
- Configured Microsoft Intune for hybrid domain join and endpoint policy enforcement; deployed Zabbix monitoring for host availability, service health metrics, alerting, backup verification, and patch compliance tracking.

Esports Broadcast Network Infrastructure | Sep 2025

- Designed and deployed a dedicated production LAN using UniFi/Ubiquiti Layer 2 switching, static IPv4 addressing, subnetting, PoE injectors, and dual-NIC workstation isolation — applying core networking fundamentals (TCP/IP, DHCP, Wi-Fi-adjacent connectivity) to a live production environment.
- Racked, cabled, and configured all network equipment; supported specialized AV/conferencing-style endpoints including Dante audio devices, Yamaha digital audio equipment, announcer consoles, microphones, and connected peripherals — documenting configurations for ongoing operational reference.

EDUCATION

B.S. Information Technology, Software Engineering Concentration | Fisher College, Boston, MA • May 2026 • GPA 3.83 • Dean's List, Academic Excellence Award

CERTIFICATIONS

CompTIA Network+ (N10-009)

TECHNICAL SKILLS

Help Desk & Support Operations: Tier-1/Tier-2 help desk & desktop support, 1st- and 2nd-line escalation & incident resolution, ticketing (Spiceworks; transferable to Freshservice/ServiceNow-style platforms), remote support (Quick Assist, RDP), password resets, customer service, documentation, mentoring & training, continuous process improvement

Identity & Access Management: Active Directory (AD DS), Microsoft Entra ID (Azure AD), Entra Connect (hybrid identity, SSO, password writeback), account/user provisioning & deprovisioning, MFA enrollment, RBAC, IAM, joiner/mover/leaver workflows

Endpoint Deployment & Management: Microsoft Intune (MDM), Windows imaging & deployment, Group Policy (GPO/GPP), AppLocker, JAMF (familiar; transferable to Kandji), patch compliance tracking

Asset Management: IT asset/inventory tracking, hardware lifecycle management & stock levels, hardware upgrade/replacement coordination, peripheral & equipment management

Operating Systems: Windows 10/11, Windows Server 2022 (systems administration), macOS, Linux (Ubuntu Server)

Microsoft 365 & Collaboration: Microsoft 365/O365 (Exchange Online, OneDrive, SharePoint, Outlook, Word, Excel, PowerPoint, Teams), conference room A/V & videoconference support

Networking: TCP/IP, DNS, DHCP, Wi-Fi troubleshooting, VPN concepts, IPv4 subnetting, VLANs, hybrid on-prem/cloud support, rack/stack/cabling, port tracing & patch panel documentation
